ABSTRACT
The purpose of this study is to investigate digital security systems and to examine the factors involved in information security systems among ICT professionals. Digital preservation encompasses a wide range of activities designed to extend the usable life of machine-readable computer files and protect them from media failure, physical loss, and obsolescence. Internet based applications require appropriate mechanisms because millions of users will access information contents. Security is one of the strategic technologies that will increase the value and usage of internet based information resources. Protecting confidentiality of database has become important in internet based applications.

KEY WORDS: digital preservation, libraries.
