ABSTRACT

Student loans are currently in operation in more than 80 countries around the world. They vary enormously based on central objectives. The basic objectives influence the choice and design of various parameters involved in the execution of the program starting from the choice of administering and funding agency, who is eligible to get the loan, security or guarantee required, loan amount covered – whether tuition or living or both the expenses, rate of interest charged – a significant lever in deciding the subsidy, the extent of grace and repayment period involved, repayment modalities, repayment incentives and waivers. This paper is proposed to study the situation of education loan at International Level in various European Countries in Pre and Post 1990’s.

KEY WORDS: Student Loan, Parameters, Funding Agency, Execution.
