

THE IMPORTANCE OF SOCIO-PEDAGOGICAL EDUCATION IN THE DEVELOPMENT OF THE SPIRITUAL, LEGAL CULTURE OF GIRLS IN THE FAMILY

Tojiboyeva Sevara Hayrullayevna,

Teacher of the Biology Department of the Kokand State Pedagogical Institute

ANNOTATION

In family upbringing, the behavior of the mother is transferred to the daughter. According to this, our wise people say, "See the mother and take the daughter." In the upbringing of a girl child, the main signs that make up her moral qualities are: modesty, chastity, manners, intelligence, modesty, eloquence, modesty and sophistication.

Keywords: Family, education, healthy lifestyle, spiritual culture, legal culture, social pedagogy, school, students, moral values, teachings.

The family is the main social institution that will become the foundation for the social, economic and demographic development of society, and the status of the family in our country is extremely high. The healthier the family environment, the more independent society is the land and prospects. In the development of the personality of a child, who is the creator of his own life, spirituality and future, an important role is played by the family environment, a healthy lifestyle.

The main link of the parent society is the sincere feeling of the holiness of the family, the responsibility of the couple in keeping the family strong, stable and Lifelong, the approach to raising a child, the heavy burden of the family is the role of the parent in tortitsh, that is, I find a father, I take a mother, I like-minded, High spiritual and moral relations in the family are an urgent problem of age-old and centuries-old, strengthening the place of national and universal values and improving social life.

And the birth of a healthy child is associated with the upbringing of a healthy girl. In family upbringing, the behavior of the mother moves to the girl. Accordingly, our wise people say, "Take your daughter by seeing her mother." In the upbringing of a girl, the main characters that make up her spiritual qualities are: Hayo, chastity, decency, prudence, saramjon-competence, IBO, humility and elegance. The family is a golden ring connecting the chain of generations and is a socio-biological phenomenon caused not only by the need to regulate the functions of a "couple", but also by the need to leave offspring.

The birth of a child in a family is a divine blessing that harmonizes a couple's relationship. As the girl transmits the child, they open their hands to the prayer "find your happiness where you go, grow old by adding with your partner and become uvali-juvali." As noted above, in the upbringing of healthy offspring, a girl should note a special position of the child. Especially when a girl grows up mentally, physically and spiritually healthy, the interaction of the family, school and neighborhood, that is, the effectiveness of the educational work carried out, is extremely important. There are many eyes watching a girl. To what extent his intelligence, dignity, temperament, readiness for family life are questioned. Before giving an assessment to a girl, her parents are assessed as: "her clothes are also suitable for her, whether she is fair, suitable for herself." In this place, the views of the Yang and the neighbor-neighbors turn out

to be more significant. Because they are felt by the main experts who assess how the girl raised the child. That is, there will be yangas, neighbors, virgins and relatives, as well as employees of the educational institution in particular. The main responsibility in the upbringing of the girl child lies with the mother. A well-mannered, attentive, mehnasevar mother always wants her daughters to be like her, and spends all her knowledge and experience on raising a girl, being fluffy. It should be noted that the father, relatives, neighborhoods and educational institutions have a special place in this place.

The parent is required to approach the upbringing process not blindly, but systematically and purposefully, fully understanding the Sharia and legal duties and obligations to his children. There are a number of pedagogical, medical-biological, social, legal and other factors of child education. In particular, there are the following socio-pedagogical factors in the upbringing of girls: a healthy lifestyle in the family; the upbringing of a girl; the role of young mothers in the future of the nation; the role of spiritual heritage in the upbringing of a baby; the education of attitude and treatment; health and hygiene; the paradigm of child education; School of the mother-in-law and the older generation; humane and legal education; the role of events in upbringing; the influence of neighborhood people in raising children, etc.

In today's market economy, it is beneficial for both the family and the society to keep the families eventful and prosperous, to attract their children to socially useful work, to spend their free time meaningfully, not to let idleness and the child get bored, to deal with life problems among themselves and to patiently overcome them. It should be noted separately that a mother with a spiritual, legal culture will be able to choose the right and clear path even in any confused, problematic situations.

The future of the nation, the birth of a healthy child on the one hand depends on the healthy growth, upbringing of the girl, another aspect is associated with the activity of the expectant mother during the gestation period. From the period of a woman's pregnancy, the stages of the birth of a child and its further development require the solution of any social, educational, medical and economic problems.

If the birth of a person and his upbringing are a social phenomenon, then in social life the upbringing of a girl, the upbringing of a mother is extremely important and extremely delicate. Since the pregnancy of the expectant mother, especially a young, inexperienced mother, the protection of her health includes a respite from scientifically based measures. In addition to such factors as complex measures that ensure the health of the expectant mother, hygienic conditions, timely medical examination, nutrition in moderation, sleep, physical activity, enjoying fresh air and sunlight, the presence of the expectant mother in a good mood, good intentions and dreams are important in the development of the fetus.
