INTRODUCTION

Cash flows, investments, and income levels are ways to achieve each other. In financial markets, the name and buyer of finances also appear to be changing depending on different types of cash flows, depending on their publicity and privateness. This provides important information for changes, investment and income levels.

There may be instruments and facilities, investment portfolios, corporate systems, currency and many other options that indicate payment on their own flow and duration. This will help to increase the level of investment, income.

Cash flows include several instruments, such as deposits, currency exchange, loans, bank loans and so on. This can also change the outlook for changes in flows, investment and income levels. It is also funding, capitalization, guaranteed loans, tax payments, and other finance strategies, investments, and other issues that will help increase the level of income. By studying these topics, it is possible to identify ways that are useful in increasing income levels and making investing efficiently.

Cash flows, i.e. financial resources, play a major role in conducting and generating revenue. However, there are also problems in this area. There are several reasons why investment problems can stop attracting investment and increasing their levels:

✚ Continuity of crisis situations: In years of financial crisis footprint and other dangerous circumstances, the transfer of investment can be risky. In this case, inconsistency can create serious issues and be dangerous for people who are able to make investments.

✚ External hazardous situations: Political, economic and personal external situations with other countries are also important factors for investment. Observing external hazardous situations can cause investment to stop after investing.

✚ The power of the deposits department should be you: When organizing investments, it is necessary to conduct financial security analysis, which should be compared to other

achievements. However, the deposits department can be strong and in this case, high money can be used in relation to the treatment.

Ways to invest and increase the level of income require being able to solve these problems. Some of these paths are as follows:

Financial provision: It is possible to apply financial provisions where risks associated with investments can be reduced. Financial provisions, guaranteed financial institutions, or s can be provided through the entity companies.

Financial management: It can be offered by financial assistants, consulting companies and other entrepreneurs who serve to minimize risks associated with financial management, investments.

CONCLUSIONS AND SUGGESTIONS
