### ABSTRACT

In this article, it is the idea of continuing education in English rather than in Uzbek as a new innovation. The relevance of the article lies in the fact that special emphasis is placed on the ability of children to speak from language skills during the lesson. It is advisable to try this new change first in Presidential or specialized schools as a first experiment. It may be difficult to teach children communication and technical tools related to science in English at first, but after a while they will remember lexemes (of course, if they do not understand, it is better to use their mother tongue). As a result, they gain self-confidence through language imitation methods, and also increase their vocabulary with the help of communicative language teaching methods. Below, the article explains how to continue this innovation in the classroom using English and a list of science terms.

**Keywords:** pedagogical technologies, educational tools, education, innovation.

### INTRODUCTION

There have been a lot of critical analyzes in technology subject by majority of pedagogues in last five years. Some pedagogues such as M. Tilavova, Rasulova Z. Qo'ysinov R. are inventing a new methods of this subject and how to educate it with modern methods and new pedagogical technologies in Uzbekistan.

### METHODOLOGY

It has not been spread and studied that continuing education of teaching technology at primary and secondary schools in English in Uzbekistan. As a result, we might have less subject related vocabulary than other fields. However, it does not mean that we can not use this technique in this sphere. This idea will be much more beneficial for learning collocations of communication by language learning process in the lesson as well as learning technological tools.

### DISCUSSION

We may have a number of shortcomings in implementing this idea at present. For example, other foreign languages can be taught instead of English in some schools. In such cases, we can choose schools that is taught only English as a second language. It is true that, we may not be able to implement this idea in a short time during the lesson in this field, but if we try it gradually with consistency and regularity, it will be effective. Why English? We know that English is the language used by the most nationalities of the world for communication and economic and business. Through this language, we can easily deal with the world market and in the field of tourism.

We know that today's era is moving fast due to modern technology. Keeping up with modern technologies is very important for us. However, knowing, learning, and perhaps teaching the latest educational innovations and methods are crucial things for us.

Modern pedagogical technologies can not only make our educational process meaningful and effective, but also contribute to improving children's knowledge. Many pedagogical technologies can be used for children in primary education. For example, we can mention the idea of the technology of teaching technology subjects in English. We know that children are taught English subjects twice a week from 1st grade and it is very effective in improving their English vocabulary. If technology subjects are taught in English, sometimes with using the mother tongue, the child can quickly understand the language, listen and start speaking in an environment with English speakers. For this, first of all, it is important for children to be able to say hello, to explain the topics covered, to address the teacher in class, to ask questions, to answer questions, and to be able to know the translation of educational materials and necessary educational materials related to technology in English.

Translations of educational materials in technology include:

Scissors – qaychi

Papers - qog'oz

Colored paper - rangli qog'oz

Box- quti

Glue- yelim

String- ip

Needle- igna

Cloth- mato, gazlama

Ornament- naqsh

Decoration- bezaklar

Bottle of drinkings- ichimlik idishlari

Stickers- yelimli qog'oz

Matches box- gugurt qutisi

Stick of ice creams- muzqaymoq cho'plari

Carton- Karton

Quilling paper- kviling qog'ozlari

Lego, brick- lego

Liquid glue- suyuq yelim

Round toothpick- tish tozalagich

Awl- bigiz

Thimble- angishvona

### CONCLUSION

If the vocabularies that are related to the topic are taught by showing in every lesson, children can learn by heart as soon as possible. Because children have brilliant memory in case they have a lesson by visual aids. To conclude, our president is providing all facilities and unlimited necessities for us in order to use and exchange them. Only we need to utilize them in an effective way.
