ABSTRACT

In the article education in the processes modern information and communication technologies integration importance, possibilities and efficiency analysis Technologies to education input, students creativity, independence thinking and education quality It also increases the teachers' pedagogical qualifications develops, education process individualization to do help gives. In the article technologies in integration problems, opportunities and practical recommendations Their effective application education system further good quality to develop service does.

Keywords: Modern technologies, education, integration, information and communication, interactive, pedagogy, students, innovation.

INTRODUCTION

Modern world intensity with changing going and technologies of life all on the fronts big place occupied the period is watching. Education this system too from changes aside will not remain. The students knowledge to take process, their creative and critical thinking abilities development, as well as teachers pedagogical approaches in update modern information and communication technologies integration necessary on demand has become. In education technologies use only lesson process alleviate or update with not limited to, but education quality improve, students activity increase, independent thinking and creativity develop such as many positive to changes take is coming.

Modern technologies education to the system integration is education in institutions information and communication technologies (computers, internet, mobile applications, interactive boards and other electronic tools) effective use This process means to teachers lessons interactive and impressive in a way organization to the students and reading process independent accordingly done increase opportunity creates. Also, technologies using students research activities development, new methods and pedagogical methods application opportunities expands.

Modern of technologies to education introduction, to students not only traditional lesson materials, but also various kind interactive resources, video, audio and other multimedia materials mastery opportunity creates. This is students the topic deeper to understand, to understand knowledge in practice to apply and training materials interesting in a way to study help It also provides the technology integration to teachers own lessons remote or online in a way transfer opportunity gives, this and everyone in education for comfortable and easy entrance opportunities creates.

However, technologies education to the system current to grow only technician tools current to grow with is not limited. Their effective integration for teachers new pedagogical methods and to technologies adaptation, technologies pedagogical to goals appropriate use and to students necessary information and skills to deliver for special programs and resources

working exit necessary. With this together, in education from technologies use with related various kind problems, for example, technical problems, internet at the entrance restrictions or to technologies too much outside rely on such as negative consequences also arise arrival possible.

This point of view from the perspective of education in the processes modern technologies integration, only education quality increase for not, maybe society digital and informatization to the processes preparation It is also important for. This in the article, education to the system technologies integration main aspects, opportunities, challenges and prospects analysis will be done.

Modern education system intense developing in the world, technologies education to the process integration necessity day by day increasing Information and communication technologies education to the system introduction, students and teachers for new opportunities is creating. Today today, from technologies use only education quality increase with not limited to students independent thinking and creativity also important in developing role plays. In the article modern technologies education to the processes integration importance, methods and prospects seeing is released.

ANALYSIS AND RESULT

In education modern technologies in integration one row problems First, teachers and students for technologies effective in use knowledge and skills shortage Secondly, technologies entrance opportunities everyone for equal not. Some Internet network in the regions and modern technician to the tools entrance limited. Also, technologies too much outside Reliance is also pedagogical the approach weaken possible. Such in the case of, education process human aspect - teacher and student between communication, emotional and psychological sides slowdown danger available. Modern technologies education to the processes integration results one row positive to changes take These changes are coming. not only education system efficiency increases, maybe students general also great for development contribution Addictive. Below education in the processes of technologies integrated impact analysis will be done.

Modern technologies education to the process integration the most important from the results one this education of quality noticeable at the level Internet and multimedia tools through students, traditional textbooks with one in a row, various kind additional to resources also entrance as much as possible has They will be. This to them lesson topics further deeper to learn, to master and expanded to the information has to be opportunity creates. Example for, online lessons, video materials and interactive simulators using students the topic much interesting and understandable in a way learn. Technologies students independent thinking abilities increases. Online platforms, forums, and interactive tasks using students own knowledge independent accordingly inspections, news with acquaintances and thoughts team with discussion they do This process is possible. students creative thinking and problems solution to do abilities It also uses technologies use to students creative project works and presentations in creation help gives. Teachers technologies education to the process in integration permanent accordingly qualification increases necessary. Technologies effective application to teachers new pedagogical methods and approaches application opportunity

gives. Teachers interactive education tools, remote education platforms, and online from resources use through lessons further effective and interesting in a way transfers It is possible. This is your own in turn, it also has a positive impact on the professional development of teachers impact does.

Modern technologies to teachers to the individual needs of students suitable accordingly education to give opportunity creates. Computer systems, online applications and special programs using teachers students knowledge level assessment and them separately preparation to the possibility has For example, tests and interactive tasks through students which in the field disadvantages that there is determination and them correction It is possible. This is education in the process Individual approach to students based on education they get provides. Technologies remote education done in increasing big importance Internet networks through students and teachers each other with remotely standing communication to do, lessons study and from teachers help to receive This possibility is especially important during the pandemic. during education process continue in progress students and to teachers big help gave.

Remote education, also education system geographical and social borders expands, because this through students any from the place education they receive possible. However, from technologies excess use education in the process some negative to the consequences take arrival possible. Technologies too much outside rely on in students passivity and physical activity to decrease take arrival It is also possible to time screen opposite to sit to health damage to deliver possible. From this besides, technologies wrong or aimless use students attention distraction and reading process efficiency reduce possible. Modern technologies education to the process in integration one how many social problems also arise arrival possible. For example, some in the regions technician infrastructure and to the internet entrance opportunities limited to be It is possible. This is education in the system to inequalities take comes and some students education in receiving opportunities limited to be possible.

Conclusion as in other words, modern technologies education to the processes integration education quality increase, students creative thinking development, teachers pedagogical qualification increase and education Individual approach to the process based on organization to be completed help However, technologies integration in the process to the surface coming technical, social and to health related problems eliminate to grow for effective measures visibility necessary. With this education system technologies correct and effective accordingly application through further development possible.

Modern technologies education to the processes integration education system efficiency noticeable at the level increases. Technologies to education introduction, to students own knowledge further effective in a way mastery opportunity creates, that with together, to the teachers lessons innovative and interactive in methods organization to reach help This process students independent thinking, creativity, analytical thought and problems solution to do abilities to develop service does.

In education from technologies of use the most big from the advantages one this education process individualization. Each student's to the needs suitable accordingly education organization to grow opportunity Internet resources, multimedia tools, interactive platforms

using students own knowledge expansion and to master further interesting and effective in a way done. They also increase the technology integration education remote and comfortable to do opportunity giving, wider audience for open to be provides.

However, technologies education to the processes in integration some. There are also problems. For example, technologies at the entrance inequality, technical malfunctions, teachers incompetence or to technologies too much outside rely on such as issues education in the system serious obstacles to the surface to bring. This is possible. problems eliminate to grow for education in institutions technician infrastructure strengthening, teachers permanent accordingly qualification increase and technologies pedagogical goals based on use according to training courses organization to be necessary.

With this together, from technologies use education in the process not only to know, maybe social and emotional development. It is also important for. Technologies integration, students new opportunities creating and distributing them globally competitive to be. This process, of course, is part of education. in the future further effective and stable to be provides.

Conclusion as in other words, modern technologies education to the processes integration education quality increase, students creativity development, teachers pedagogical qualification improvement and everyone in education for comfortable to be to provide service does. With this together, technologies correct and effective application for relevant infrastructure, pedagogical approaches and qualification increase programs necessary. This is your in turn, education system digital transformation and future to the success big contribution Addictive.

CONCLUSION

Modern technologies education to the process integration education quality to improve, students creativity and independent thinking to develop big help. However, technologies in integration face bride problems eliminate to grow for teachers qualification improvement, technologies to enter provision and pedagogical the approach storage necessary. With this together, in education technologies application not only students, maybe teachers and education system for new opportunities creates.
